General Notes

Use	<ul style="list-style-type: none"> • Historical Usage will be provided to an ESP upon Request. The request will be made using the 814E documents. • Historical Usage can be requested for an entity that is already a customer of the ESP • Historical Usage can be requested for any customer that has not restricted the release of their historical usage. This is state dependent, some states allow this scenario, others do not. • The Historical Usage Transaction Set is sent by the LDC only one time per ESP request. No corrections or changes will be transmitted. The Historical Usage data is correct for the point in time that is it requested. Subsequent adjustments to Historical Usage will not be transmitted to the ESP. • If providing history totalized for an account, use "SU" (Summary) in PTD01, else if providing history by meter, use "PM" (Physical Meter) in PTD01.
LDC Definitions:	<p>The term LDC (Local Distribution Company) in this document refers to the utility. Each state may refer to the utility by a different acronym:</p> <ul style="list-style-type: none"> • EDC – Electric Distribution Company (Pennsylvania, Delaware) • LDC – Local Distribution Company (New Jersey) • EC – Electric Company (Maryland)
ESP Definitions:	<p>The term ESP (Energy Service Provider) in this document refers to the supplier. Renewable Energy Provider Definition:	<p>The term Renewable Energy Provider in this document refers to the party that provides Renewable Energy Credits (RECs). This party does not provide generation to the account. Each state may refer to the Renewable Energy Provider by a different acronym:</p> <ul style="list-style-type: none"> • GPM – Green Power Marketer (New Jersey) <p>Note: The transaction will either have an ESP or a Renewable Energy Provider, but not both.</p>

Pennsylvania Notes

The Pennsylvania default is 12 months of Historical Usage, the following EDCs offer more than 12 months...

- a. PECO – default is 24 months

Requirements for uniform support of Net Metered Customers

- SU (Account Services Summary) Loop –reports consumption summarized/totalized for account by unit of measure for net metered customers. (First Energy, PPL, and UGI support)
 1. When the customer’s consumption is greater than generation for a given service period, the KH will be reported as net consumption (QTY01 w/actual = QD or estimated = KA) with the total generation subtracted from total consumption.
 2. When the customer’s generation is greater than consumption for a given service period, the KH will be reported as net generation (actual = 87 or estimated = 9H) with the total consumption subtracted from total generation).
 3. In either scenario, the QTY02 will never be signed negative.
- RT (Rate) Loop –reports consumption summarized/totalized by rate and by unit of measure for net metered customers. (PECO supports)
 1. When the customer’s consumption is greater than generation for a given service period, the KH will be reported as net consumption (QTY01 w/actual = QD or estimated = KA) with the total generation subtracted from total consumption.
 2. When the customer’s generation is greater than consumption for a given service period, the KH will be reported as net generation (actual = 87 or estimated = 9H) with the total consumption subtracted from total generation).
 3. In either scenario, the QTY02 will never be signed negative.
- PM (Meter Detail) Loop – reports consumption provided by meter by unit of measure for net metered customers: (Duquesne only)
 1. Single meter reporting both in and out flow.
 - a. When the customer’s consumption is greater than generation for a given service period, the KH will be reported as net consumption (QTY01 w/actual = QD or estimated = KA) with the total generation subtracted from total consumption.
 - b. When the customer’s generation is greater than consumption for a given service period, the KH will be reported as net generation (actual = 87 or estimated = 9H) with the total consumption subtracted from total generation).
 - c. In either scenario, the QTY02 will never be signed negative.

Maryland Notes

- Measured/Billed Demand – add note to Demand segment to indicate AP, BGE, and Pepco do not store measured demand, and will send Billed demand. Delmarva only stores Measured demand.
- Maryland EDI CC 15 added support of the EDI 867 Historical Interval (HI) transaction for Maryland. As of 1/28/13 the actual implementation dates have yet to be determined or if the historical data will be provided at the account or meter level for all ECs.
 - BG&E Note:** If this is an Historical Usage (HU) request for a interval account, the response will be accepted with a status of “SNP”. This informs the supplier that the historical interval data is available on the web. If this is an Historical Usage (HU) request for a non-interval account, the response will be accepted and the historical usage will be provided via an 867HU. BGE moving to HU/HI support via EDI and pre-enrollment for more information contact BGE supplier support.
 - Delmarva Note:** Delmarva will provide an 867HU (Monthly Historical information) for all Historical Usage (HU) requests. Requests for historical interval data must be made outside of EDI. Delmarva to support 867HI during new CIS implementation tentatively scheduled for 3Q 2014.
 - PEPCO Note:**
 - Interval metered accounts (non-AMI/Smart meter): The HU request will be accepted with REF1P = HIA. 867HU summary will be provided and the historical interval data is posted on the web.
 - Non-Interval metered accounts & AMI/Smart metered accounts: The HU request will be accepted and the historical usage will be provided via EDI 867HU. If no historical usage is available, the request will be accepted with REF1P = HUU and no 867HU will be sent. PEPCO to support 867HI during new CIS implementation tentatively scheduled for 3Q 2014.
 - Potomac Edison Note:** PE will provide an 867HU (Monthly Historical Information) for all Historical usage (HU) requests. Requests for historical interval data must be made outside of EDI. Potomac Edison to support 867HI estimated 3Q/4Q 2013 and will provide at the account level.
- Providing historical monthly data
 - Delmarva, Potomac Edison & BGE (post enrollment only) – totalized to account level (PTD*SU loop)
 - PEPCO – totalized (PTD*SU loop) & meter (PTD*PM loop)

-----------------	--------------	------------	--	------------------

When REF01 is MT, the meter type is expressed as a five-character field. The first two characters are the type of consumption, the last three characters are the metering interval. "COMBO" is used for a meter that records more than one measurement. Valid values can be a combination of the following values:

Type of Consumption

K1	Kilowatt Demand
K2	Kilovolt Amperes Reactive Demand
K3	Kilovolt Amperes Reactive Hour
K4	Kilovolt Amperes
K5	Kilovolt Amperes Reactive
KH	Kilowatt Hour
T9	Thousand Kilowatt Hours

Metering Interval

Nnn	Number of minutes from 001 to 999
ANN	Annual
BIA	Bi-annual
BIM	Bi-monthly
DAY	Daily
MON	Monthly
QTR	Quarterly

For Example:

KHMON	Kilowatt Hours Per Month
K1015	Kilowatt Demand per 15 minute interval

Other Valid Codes

COMBO	This code is used to indicate that the meter has multiple measurements, e.g., one meter that measures both kWh and Demand.

 2 Only one of QTY02 or QTY04 may be present.
Semantic Notes: 1 QTY04 is used when the quantity is non-numeric.
Comments:

Notes:	Each QTY/MEA/DTM loop conveys consumption information about one metering period.
PA Use:	<p>Required for PJM participants. The QTY/DTM loop may be sent twice depending on the time of year the Historical Usage is being provided. (PLC is effective June 1 - May 31) One iteration will show the current PLC and a second iteration will show the PLC that will be effective in the period defined in the DTM segment. Currently the PA EDCs change the PLC effective June 1st. Once the EDCs are aware of what the next effective PLC will be (typically in December) they should begin providing it on transactions.</p> <p>For example, in February 2010 the PLC values would be reported as: QTY*KC*476*K1 DTM*007****RD8*20090601-20100531 QTY*KC*450*K1 DTM*007****RD8*20100601-20110531</p> <p>Whereas in September 2010 the PLC value would include only one loop because the following year's PLC is undetermined: QTY*KC*450*K1 DTM*007****RD8*20100601-20110531</p> <p>The effective dates for PA EDC implementation is as follows: First Energy, PECO, & PPLEU: must support NLT 5/10/2013. Duquesne: will support NLT 1/31/2014</p>
NJ Use:	<p>Required. This will be the Peak Load Contribution in effect when the transaction is requested. NJ Note: PSE&G sends Capacity Obligation to PJM.</p>
DE Use:	Same as NJ
MD Use:	Required for PJM participants.
Example:	QTY*KC*752*K1
