

A. Surveillance Overview

Surveillance involves monitoring for influenza viruses and their health impact.

- Overview of current surveillance activities
- Protocol for collection of information about unusual respiratory illness cases/cluster
- Information on how to identify and monitor persons exposed to suspect animals
- Case/contact identification and reporting protocols (including forms)
- Contact tracing protocols (including forms)
- Description of changes to surveillance activities as the pandemic progresses
- Methodology to capture case counts and types of community containment measures implemented as staff resources decline
- Guidance for collecting clinical and epidemiological data
